OPERATING REMOTE SPOOLPRINT/VM

Remote SpoolPrint/VM is designed to operate with no operator intervention. The following command is provided to start and stop the VTAM communications, and to display the status of the network.

The BDSMON command is used to control the VTAM target task, which controls each subtask. The BDSMON command can only be issued when logged on as BDSTGT. The format of the BDSMON command is:

    BDSMON   **START**
                     DISPLAY

START: Starts the VTAM link. Please note that the PROFILE GCS for user BDSTGT issues a BDSMON START.

DISPLAY: Shows the subtasks defined to BDSTGT and if they are active. For example, if BDSMON DISPLAY is entered, the console will show:

BDSMON DISPLAY

TASK	LU NAME	MODE	PGM
ATL01	AS40001	RSPOOL	BRS00250
ATL02	AS40002	RSPOOL	
MANSF1	S3601	RSPOOL	BRS002
MANSF2	S3602	RSPOOL	BRS00250

Note: If the PGM column contains BRS002xx, the task is communicating with the S/3X.
