Release Compatibility Table

This chapter describes the procedures to determine if the new release of FileXfer3X/400 is compatible with existing instances of BDS software that are installed on this LPAR. To determine the existing software's release, run the corresponding command for each/all instances of BDS software installed on this LPAR.

Product	Command
Spool Organizer/400	**BRODERICK/BSOSETUP**
Remote SpoolPrint/400	**BRODERICK/BRSPLSETUP**
FileXfer/400	**BRODERICK/BXFERSETUP**
E-mail Utilities/400	**BRODERICK/BEMSETUP**
Spool PDF Overlay/400	**BRODERICK/BOVSETUP**

Note: If needed, set the ASP Group to the proper value (**SETASPGRP**) if needed before running the above commands.

The following table shows the other products' oldest release that is compatible with the new release of FileXfer3X/400/400:

Product	Release
Spool Organizer/400	5.7 0000
Remote SpoolPrint/400	6.2 0000
FileXfer/400	5.2 0000
E-mail Utilities/400	1.0 0000
Spool PDF Overlay/400	1.0 0000

Any installed BDS instance with a release that is earlier than the above values is not compatible with the new release and must be updated at the same time this FileXfer3X/400 instance is updated. Failure to update non-compatible BDS software instances could cause other BDS software to stop working after this FileXfer3X/400 install/update is performed.

You can update the BDS software instances in any order.

For example, if the **BRODERICK/BSOSETUP** command shows that Spool Organizer 5.6 1701 is installed on this LPAR, it must be updated along with updating FileXfer3X/400.

FILEXFER3X/400™
